Industry: Telecommunications

Challenge and Solution: To provide database retrieval, pattern recognition, graphic conversion and artificial intelligence functions in the energy and communications industries, Osmose Utilities Services, Inc. (formerly Coherent Networks) must hold and find meaning in millions of inter-connected objects that are constantly changing.

Osmose selected Objectivity/DB as the foundation for all its products because of Objectivity/DB’s scalability, performance, platform heterogeneity, distribution and federated qualities, flexibility, ease of use, and Objectivity/DB’s on-line versioning. With Objectivity/DB, Osmose can also transparently cache its integrated information, and reduce the need to maintain additional databases.
